

IEEE-Eta Kappa Nu

Missouri S&T Eta Kappa Nu Sponsorship Opportunities

Gamma Theta Chapter

Missouri University of Science & Technology

Our Mission

The Gamma Theta Chapter of Eta Kappa Nu at Missouri S&T is one of the most active professional honor societies on our campus. We welcome several high-performing students every semester, along with graduate students and professional members.

Our focus is to provide students in the Electrical and Computer Engineering Department the opportunities to develop skills and network. We offer numerous resources in our student project lab, ranging from study materials to electrical equipment. These tools allow students to work on personal projects and gain design experience outside of their courses. We also serve our local community through partnerships with non-profit organizations and educational outreach programs.

How Your Support Helps

Our branch of Eta Kappa Nu is always looking to expand our resources to better serve the student body, whether that be investing in our lab space or allowing students more opportunities to connect with companies.

We would like to act as the bridge between students in our department and your company! By partnering with us, your company will be able to gain more exposure on campus and engage with the brightest Missouri S&T has to offer.

Events

Company Presentations

Informational session for **20+ students** to learn about your company and hear about possible career opportunities!

Skills Workshops

15+ students participate in hands-on mini-projects to become familiar with fundamental skills, such as coding in different languages and soldering.

Career Fair Banquet

Networking event for **20-25** students to speak to company representatives one-on-one about opportunities over a formal dinner.

Induction Banquet

Official ceremony to welcome new members, honor current and previous members, and showcase accomplishments to friends and family.

Other Opportunities

Equipment and Resource Donations

We are always interested in allowing our fellow students to become familiar with different types of equipment or help them access the tools they need to make their projects a success!
